

HTML, CSS + JavaScript Showcase Brief

An intermediate project brief for trainees, working in teams to launch a startup concept and build its first website using HTML, CSS, JavaScript, Figma, GitHub, and the Software Development Life Cycle.

by Tyhiesha Johnson

Project Theme

Theme name: Startup Launch Challenge

You and your team will create a startup business idea and build the company's first website.

Rather than building a website for an existing business, you will become founders. Your team will identify a real-world problem, design a solution, create a brand, and develop a professional website that introduces your startup to a potential customers and investors.

Your website should demonstrate creativity, teamwork, problem, problem solving, planning, design thinking, and technical skills.

Overview

This project is designed to introduce you to collaborative software development and the Software Development Life Cycle (SDLC).

You will work in teams to move through the same stages used by professional software development teams:

- Planning
- Analysis
- Design
- Development
- Testing
- Deployment

This project is not about building the most complex website.

It is about learning how teams work together, communicate, plan, design, develop, test, and deliver a solution.

By the end of this project, each team will have created a startup concept, designed a prototype in Figma, develop a website, managed code collaboratively using GitHub, and presented their final.

By the end, each student will have:

- A startup business concept
- A completed Figma prototype
- A GitHub repository using branches
- A collaborative HTML, CSS, and JavaScript website.
- SDLC documentation
- A deployed website
- A startup pitch presentation
- Experience working in a development

Project Goal

The goal is to build a startup website that demonstrates the concepts covered in HTML, CSS, and JavaScript while introducing students to software development workflows used in industry.

Your team should be able to explain:

- What problem your startup solves
- Who your target audience is
- Why your solution matters
- How your website supports your business idea

Suggested Project: Personal Portfolio Website

Teams may choose one of the following ideas or propose their own:

Startup Idea	Description
<i>Student Tutoring Platform</i>	Teams may choose one of the following ideas or propose their own:
<i>Pet Care Service</i>	Connect students with tutors for academic support and exam preparation.
<i>Event Planning Service</i>	Help pet owners find trusted sitters, walkers, and caregivers.
<i>Travel & Adventure Platform</i>	Help users discover and book experiences and activities.
<i>Fitness & Wellness Coaching</i>	Help users discover and book experiences and activities.
Freelance Marketplace	Connect students and young professionals with freelance opportunities.

Startup Planning Requirements

Business Name

Create a name for your startup.

Mission Statement

What does your startup do?

Problem Statement

What problem are you solving?

Target Audience

Who are your customers?

Unique Selling Proposition (USP)

Why should users choose your solution?

Team Roles

Assign responsibilities to all team members.

Startup Planning Requirements

Before writing any code, teams must design their solution in Figma.

The Figma file should include:

- ☐ Home Page
- ☐ Services or Products Page
- ☐ About Us Page
- ☐ Contact or Register Interest Page
- ☐ Mobile Layout
- ☐ Desktop layout Colour Palette
- ☐ Typography Choices
- ☐ Logo Concept
- ☐ Navigation Design
- ☐ Buttons
- ☐ Cards
- ☐ Forms
- ☐ Design System

Figma Deliverables

- Public Figma View Link
- Wireframe
- High Fidelity Designs
- Design System

Figma Deliverables

No coding should begin until the team has completed and reviewed their Figma designs.

The final website should closely match the approved design.

Website Requirements

Your website should contain at least 4 pages or sections.

Option	Option
Home Page	About Us
Services Page	Products Page
Contact Page	Register Interest Page
FAQ Page	Team Page
Testimonials Page	Pricing Page

- ☐ Clear page title
- ☐ Navigation bar
- ☐ Hero section
- ☐ Multiple content sections
- ☐ Images with alt text
- ☐ Links
- ☐ Lists
- ☐ Contact form
- ☐ Footer
- ☐ Consistent styling
- ☐ Responsive design
- ☐ Professional branding
- ☐ Clear call-to-action buttons
- ☐ JavaScript functionality
- ☐ Clean layout and spacing

HTML Concepts to Include

Your website should contain at least 4 pages or sections.

- HTML document structure
- DOCTYPE
- html, head and body
- Meta tags
- Headings

- Paragraphs
- Links
- Images
- Lists
- Forms
- Labels and Inputs
- Buttons
- Semantic Elements
- Comments
- Correct indentation
- Readable code

CSS Concepts to Include

- External Stylesheets
- Selectors
- Classes
- IDs
- Colours
- Typography
- Margins
- Padding
- Borders
- Box Model
- Flexbox
- CSS Grid
- Responsive Design
- Media Queries
- Hover Effects
- Transitions
- Consistent Spacing

JavaScript Concepts To Include

Your project must include:

- ☐ Form Validation
- ☐ Event Handling
- ☐ DOM Manipulation
- ☐ Variables and Data Types

- ☐ Functions
- ☐ Conditional Statements
- ☐ Arrays
- ☐ Objects
- ☐ User Feedback Messages

Choose at least two additional features

- ☐ Dark Mode Toggle
- ☐ FAQ Accordion
- ☐ Search Functionality
- ☐ Pricing Calculator
- ☐ Image Slider
- ☐ Testimonial Carousel
- ☐ Countdown Timer
- ☐ Dynamic Content Rendering
- ☐ Filtering Functionality
- ☐ Interactive Navigation Menu

SDLC Requirements

Planning

- Business idea
- Goals
- Team roles
- Project scope

Analysis

- User requirements
- Functional requirements
- Non-functional requirements

Design

- Figma wireframes
- User interface decisions
- Branding decisions

Development

- Website implementation
- GitHub collaboration

Testing

- Bugs found
- Fixes applied
- Test results

Deployment

- Live website publication

GitHub Requirements

Your GitHub repository should be neat, organised, and collaborative.

Example Repository Structure

startup-launch-challenge/

```
|
|—— index.html
|—— about.html
|—— services.html
|—— contact.html
|
|—— css/
|—— js/
|—— assets/
|—— documentation/
|—— README.md
```

Branching Requirements

Each team member must work on their own branch.

Examples:

- main
- feature-homepage
- feature-services
- feature-javascript
- feature-testing

OR

- main
- adam-dev
- angela-dev
- chad-dev
- likona-dev

Main Branch Rules

The main branch should only contain completed and reviewed work.

Students may NOT work directly on main.

Workflow:

1. Create a branch
2. Complete your work
3. Push changes
4. Create a Pull Request
5. Team review
6. Merge into main

Bonus Challenge

Choose one or more after your core project is complete.

- Deploy your website
- Add dark mode
- Create a startup dashboard
- Add animations
- Build a pricing calculator
- Add a search feature
- Create dynamic cards from JavaScript data
- Add local storage
- Create a custom logo
- Create complete design system

README Requirements

Include:

- Project Name

- Startup Description
- Problem Statement
- Team Members
- Features
- HTML Concepts Used
- CSS Concepts Used
- JavaScript Concepts Used
- Figma Link
- GitHub Link
- Live Website Link
- Challenges Faced
- Lessons Learned
- Future Improvements

Team Reflection

Write a short reflection that answers:

- What startup did you create?
- Why did you choose this idea?
- What problem does it solve?
- What was your role in the team?
- What challenges did your team face?
- How did you overcome them?
- What did you learn about teamwork?
- What did you learn about JavaScript?
- What are you most proud of?
- What would you improve next time?

LinkedIn Showcase Post

Team LinkedIn Template

We are excited to share our Startup Launch Challenge project as part of our web development learning journey.

Our team designed and developed a startup website using HTML, CSS, JavaScript, Figma, GitHub, and the Software Development Life Cycle.

Through this project we practised planning, design, collaboration, version control, testing, deployment, and frontend development.

One challenge we faced was [insert challenge], and we overcame it by [insert solution].

This experience helped us understand how real development teams work together to build digital products.

GitHub Repository: [Insert Link]

Figma Design: [Insert Link]

Presentation Guide

1. Team introduction
2. Startup name
3. Problem being solved
4. Target audience
5. Figma walkthrough
6. Website demonstration
7. HTML concepts used
8. CSS concepts used
9. JavaScript concepts used
10. GitHub workflow used
11. Challenges faced
12. Lessons learned
13. Future improvements
14. GitHub repository
15. Live website

Submission Checklist

- ☐ Startup idea is complete
- ☐ Team roles assigned
- ☐ Figma prototype completed
- ☐ Figma link submitted

- ☐ Website runs successfully
- ☐ HTML structure is correct
- ☐ CSS styling is consistent
- ☐ JavaScript features work correctly
- ☐ Website is responsive
- ☐ GitHub repository is accessible
- ☐ Branches were used correctly
- ☐ Pull Requests were created
- ☐ Main branch contains final work only
- ☐ README is complete
- ☐ SDLC documentation is complete
- ☐ Reflection is complete
- ☐ Presentation is prepared
- ☐ Website is deployed
- ☐ We are ready to pitch our startup!

Thank you!
